

GenAI for Patient-Centric Healthcare

Dropdown Coverage Report

Evidence that every visible selector option in the Alkem AI Masterclass app resolves to a complete, medically relevant response.

60 min Concise theory and medical demonstrations	90 min Six case-based labs with verification
4 pillars Patient • Clinical • Pharma/Research • Governance	Safety Synthetic data • bounded task • qualified human decision

Important: Every case, image, name, and value in this kit is synthetic. The materials are for education, not diagnosis, prescribing, treatment, regulatory submission, or autonomous decision-making.

1. Executive result

Measure	Result
Complete workflow records	24
Programme pillars	4
Professional roles	16
Distinct tasks	24
Visible selector options tested	92
Options without a response	0

Result: 100% visible-option coverage

Every option shown to a user is derived from one or more complete workflow records. Unsupported intersections are removed by cascading selectors before they can be selected.

2. What counts as a complete response

Required field	Coverage condition
Medical context	Named case context and pillar
Professional fit	One or more roles and accountable human reviewer
Action	Bounded task and explicit expected output
Input	Supported input type and linked synthetic dataset
Tool route	Primary tool and verified alternatives
Prompt	Complete task, constraints, output, and verification template
Safety	Risk tier, prohibited actions, missingness and escalation
Traceability	Verification checklist and last-verified date

Selector behaviour

Each dropdown is populated from the records still reachable after previous selections. Therefore a visible option cannot lead to an unsupported intersection. Free-text search is handled separately: exact matches are shown when available; otherwise the app labels and returns the closest verified alternative.

3. Coverage by visible option

Selector	Visible option	Workflows	Status
Pillar	Clinical Workflow and Decision Support	6	Covered
Pillar	Patient Understanding and Engagement	6	Covered
Pillar	Pharma, Research and Professional Productivity	6	Covered
Pillar	Responsible AI, Governance and Implementation	6	Covered
Role	AI governance professional	6	Covered
Role	Clinical research professional	1	Covered
Role	Data privacy professional	1	Covered
Role	Doctor	13	Covered
Role	Hospital leader	9	Covered
Role	Medical affairs professional	7	Covered
Role	Medical student	2	Covered
Role	Medical writer	1	Covered
Role	Nurse	6	Covered
Role	Patient educator	5	Covered
Role	Pharmacist	2	Covered
Role	Pharmacovigilance professional	1	Covered
Role	Procurement professional	1	Covered
Role	Quality professional	5	Covered
Role	Radiologist	1	Covered
Role	Researcher	3	Covered
Task	Analyse patient feedback	1	Covered
Task	Assess an AI vendor	1	Covered
Task	Classify AI risk	1	Covered
Task	Create a clinical handoff	1	Covered
Task	Create patient education	1	Covered
Task	Debate an AI implementation	1	Covered
Task	Design a responsible pilot	1	Covered
Task	Draft a medical information response	1	Covered
Task	Draft clinical documentation	1	Covered
Task	Explain a prescription	1	Covered
Task	Improve a clinical workflow	1	Covered
Task	Improve professional communication	1	Covered
Task	Map a patient journey	1	Covered

Selector	Visible option	Workflows	Status
Task	Monitor an AI workflow	1	Covered
Task	Review a manuscript draft	1	Covered
Task	Review a medical image safely	1	Covered
Task	Review data privacy	1	Covered
Task	Search and verify evidence	1	Covered
Task	Simplify a discharge summary	1	Covered
Task	Structure clinical reasoning	1	Covered
Task	Summarise trial eligibility	1	Covered
Task	Synthesize supplied evidence	1	Covered
Task	Translate patient counselling	1	Covered
Task	Triage an adverse-event report	1	Covered
Input	Case scenario	1	Covered
Input	Clinical text	6	Covered
Input	Evidence facts	1	Covered
Input	Governance scenario	5	Covered
Input	Manuscript text	1	Covered
Input	Medical image	1	Covered
Input	Medical query	1	Covered
Input	Prescription image	1	Covered
Input	Process data	1	Covered
Input	Research abstracts	1	Covered
Input	Research question	1	Covered
Input	Safety report	1	Covered
Input	Tabular data	3	Covered
Output	Balanced response workflow	1	Covered
Output	Bilingual counselling script	1	Covered
Output	Claim-and-evidence edit log	1	Covered
Output	Clear professional message	1	Covered
Output	Current/future-state workflow	1	Covered
Output	Data-boundary checklist	1	Covered
Output	Decision record	1	Covered
Output	Differential checklist	1	Covered
Output	Due-diligence questionnaire	1	Covered
Output	Journey map and improvement backlog	1	Covered
Output	Monitoring and incident plan	1	Covered

ALKEM AI MASTERCLASS		Dropdown Coverage Report	
Selector	Visible option	Workflows	Status
Output	Observation checklist and escalation note	1	Covered
Output	One-page patient action plan	1	Covered
Output	PV intake package	1	Covered
Output	Patient fact sheet	1	Covered
Output	Pilot canvas	1	Covered
Output	Pre-screen summary	1	Covered
Output	Reviewable structured note	1	Covered
Output	Risk-and-control card	1	Covered
Output	SBAR handoff	1	Covered
Output	Search protocol and evidence table	1	Covered
Output	Service-recovery action card	1	Covered
Output	Source-linked synthesis	1	Covered
Output	Structured medicine table and teach-back script	1	Covered
Language	Bengali	4	Covered
Language	English	24	Covered
Language	Hindi	5	Covered
Language	Kannada	4	Covered
Language	Malayalam	4	Covered
Language	Marathi	4	Covered
Language	Tamil	4	Covered
Language	Telugu	4	Covered
Risk	High	9	Covered
Risk	Low	2	Covered
Risk	Moderate	13	Covered

4. Automated test evidence

Test	Pass condition
Catalog completeness	Every workflow has non-empty required fields, dataset, reviewer, safety, and verified date.
Visible option enumeration	Every pillar, role, task, input, output, language, and risk option returns at least one workflow.
Cascading intersections	For every workflow, its ordered pillar-role-task-input-language path remains selectable.
Tool integrity	All 29 tool rows contain official HTTPS URL, dataset, safety warning, reviewer, and verification metadata.
Dataset and asset integrity	Every linked CSV and synthetic prescription/image asset exists.
App empty-state scan	Legacy terminal warnings for unmatched tool/demo selections are absent.

Interpretation

This report verifies application coverage and content integrity. It does not validate model performance, tool security, clinical efficacy, or regulatory suitability.
